Common Attributes in html Tags

`class` --Allows you to set a style in the style sheet to be used in multiple tags

`name` --Used in `<a>` tags to assign a bookmark name.

`width` --Adjusts the first-line indent of a paragraph, blockquote, heading, and list tags. Negative creates a hanging indent. Supports pixels (`width="30"`), points (`width="10pt"`), percent (`width="10%"`), or em-units (`width="3em"`)

`height` -- Sets a top margin on a paragraph, blockquote, heading, and list tags. Supports pixels (`height="30"`), points (`height="10pt"`), percent (`height="10%"`), or em-units (`height="3em"`).

`style` --Allows the inclusion of CSS styles.

`align` (left, right, center)--Aligns the text in paragraph, blockquote, heading, and list tags. Supports values of left, right, and center.
